AF2.1 · My Domain, and the entry point that already existed

Agent Factory · measured 15 October 2026 · shipped in #3110 · prepared for Ali Muwwakkil

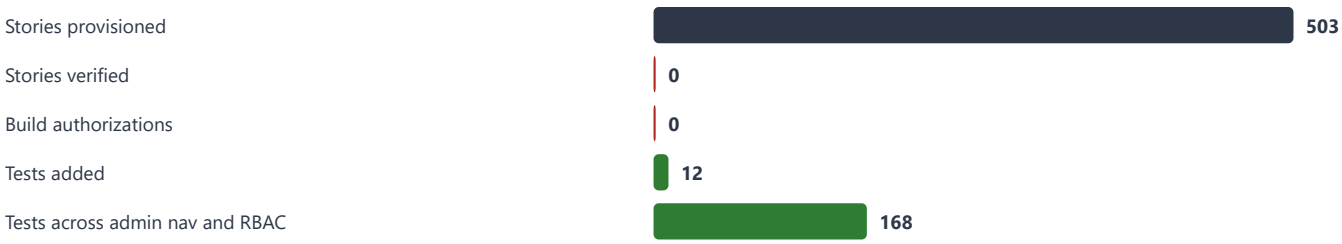
ASKED An intern management portal entry point, and a surface showing the domain they own.

DELIVERED The surface, at `/admin/my-domain`. The entry point was already built and shipped, which the ticket did not know.

> **TAKEAWAY**
>
> **503 stories exist and NONE has been started, so the page must not imply progress.**

1. **The entry point was already there.** PortalShell renders a Management Portal link under an Employee nav group, gated on holding a management role, pointing at a bridge that mints a scoped admin token. That is what was demonstrated on the 14 October call.
2. **The real constraint is honesty, not layout.** `stories_verified` and `build_authorizations` sit beside the story count ALWAYS, and the server's own disclosure sentence renders verbatim.
3. **A test reads the page's own source and fails if any figure or domain name is hardcoded.** Loading, failed and owns-nothing are three distinct states, so "not yours" can never look like "broken".

Measured



Measured against production on 15 October 2026. Bars are to scale against the largest value shown.

How it works, or did not

Grey was already built. Only the last two steps were this ticket.

What this does not establish

- NOT DEPLOYED. There are no production screenshots, so that acceptance criterion is unmet.
- The page shows the domain a MANAGER owns. Intern-facing scoping is AF2.3.

Artifact for AF2.1, filed in 02 - Intern Management Portal and Access and attached to the ticket. Built from the same data module as the one-page visual. Backfilled on 15 October 2026 under the rule that a pull request is evidence and not an artifact.
