# AF2.6 · Admissions access: the finding, not the fix

Agent Factory · measured 15 October 2026 · shipped in #3100 · one page

**TAKEAWAY**

**The ticket's premise was wrong. Taiwo has held an admin login since 18 September.**

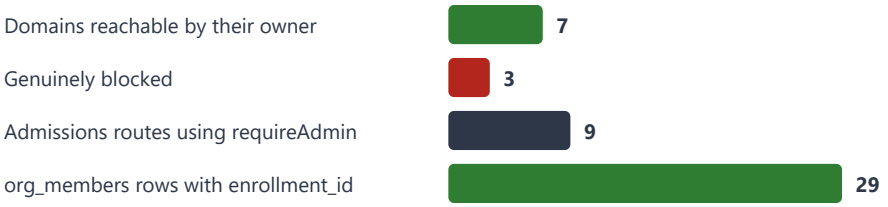
## What was found

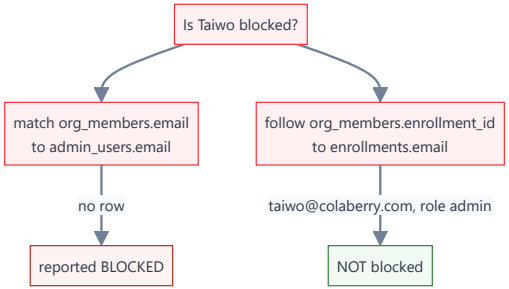
1. **An EMAIL MISMATCH produced the false blocker.** His `org_members` row carries a personal address while he signs in with the work one, so matching org_members.email against admin_users.email found nothing, and that read as "no login". The reliable link is `org_members.enrollment_id`, a real foreign key.
2. **The other half of the ticket was also void.** All nine admissions routes carry `requireAdmin`, not `requireSection`, so mapping a prefix into the section gate would have changed access for nobody. There is also no admissions SECTION KEY to map to.
3. **Reachability moved from 6 of 10 to 7 of 10.** Corrected across the registry, the ADR, nine assertions, the handoff and the master index. The remaining three were re-checked against BOTH addresses and are real.

**CORRECTION**

I asserted in FOUR places that Taiwo had no `admin_users` row. He has one, role `admin`, created 18 September.

## Measured





Two ways to ask the same question. One matches on a string people change, the other follows a foreign key.

## What this does NOT establish

- Three owners remain genuinely unreachable: Kes, Aleem and Roselen. Each has an `org_members` row and no admin login.
- Nothing was granted to anybody. This ticket produced a correction, not an access change.

Built from the same data module as the AF2.6 document, so a number here cannot drift from a number there. Filed in 02 - Intern Management Portal and Access.
