AF3.2 · Agent count reconciliation

Agent Factory · measured 15 October 2026 · shipped in #3105 · one page

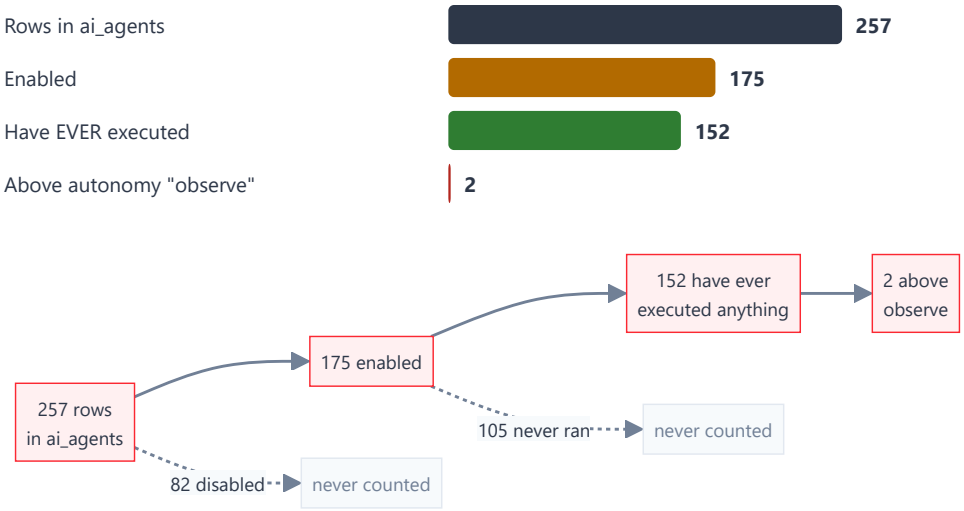
TAKEAWAY

"217" is not reproducible by any filter. The fleet was exactly 217 for about EIGHT MILLISECONDS.

What was found

1. **Eight single-column filters were tested and none yields 217.** Row 216 landed at 15:10:05.860 on 13 August, row 217 at .865 and row 218 at .873, mid bulk-seed. The nearest filter is `agent_group IS NULL` at 216: one off, tempting, and not an explanation.
2. **257 overstates the working fleet by about 40 per cent.** 82 agents are disabled and 105 have never executed once.
3. **Change the claim, not the number.** "217 down to 10" becomes "152 that have ever done anything, down to 10".

Measured



Execution was measured in ai_agent_activity_logs (4,470,103 rows), not in agent_runs, which holds 2 rows and is vestigial.

What this does NOT establish

- The interns were told 217 on the 14 October call. That has not been corrected to them.
- AF8.1 stays BLOCKED until the framing is chosen, and any external use needs a Claim Registry row.

Built from the same data module as the AF3.2 document, so a number here cannot drift from a number there. Filed in 03 - The Ten Agents and Release Zero.
